PROBLEM

How can we solve UQ student's difficulties with their current course selection experience?

VALUE PROPOSITION:

- Accepted hypothesis shows interviewees requested greater clarity and simpler integration of information when enrolling.
- Show the student the prerequisites, if any, for all courses that they may enroll in.
- Relate certain keywords and topics of interests to elective courses that may interest the student.
- Allow students to post their preferred or suggested order of courses they studied.
- Students can see the most commonly chosen order of courses from previous and current students who took the same degree.

SCREENSHOTS

MAIN ISSUES AND DATA:

- Requests for a simplified course details layout
 - "I think the biggest issue was that the information spread across a few different places. So if it was more homogenised, It would be really helpful."
- Requests for pre-made course templates
 - "Like I wish there was a way it would show a layout for us based on like certain preferences and courses that we would want to do. While also, you know, fulfilling like our requirements to graduate as well."
- Requests for a keyword-based course searching system
 - "I found it hard to like search for the courses. I wish it were easy to search the course of themselves when you're putting in what courses you're getting enrolled for"
- Requests to see user ratings of the courses
 - "But there was no way for me to figure that out, so I really wish I could easily see other students' ratings and thoughts for those courses, to make the picture a lot clearer as to whether this course is for me or not."
